

# Reducing Security Effort & Legal Fees in Data Security

Organizations face an increasingly difficult challenge in their drive to cut costs and streamline cybersecurity solutions – finding qualified professionals. This was reflected in Code42's Annual Data Exposure Report 2024, with 79% of surveyed cybersecurity leaders citing a shortage of skilled talent. The Forrester TEI Study of Incydr highlights a number of ways that Code42 clients can address this gap.

## 3 WAYS TO SAVE BUDGET WITH INCYDR

### 1 Streamline operations and optimize security team efforts

**Reallocate 2.5 FTEs by reducing the need to run forensics manually on devices.**

**Consolidate technologies and avoid other security purchases.**

"If we didn't have Incydr, we would need at least 3 more people just doing forensics, and we wouldn't have been able to transition our security team to adopt a more generalist model where everybody can do everything."

### 2 Faster resolutions and less reliance on outside legal counsel

**Avoid using outside counsel (which would cost thousands of dollars per day) for at least 60% of cases.**

**Avoid sending 10-12 cases to court in a given year.**

"Before Incydr, it could sometimes take a week to just do the investigation aspect [for high severity cases]. And then you had to tack on time for conducting more off-the-wall investigatory methods and bringing legal up to speed."

### 3 Simplify and accelerate investigations

**From 2 weeks to an hour or less to investigate.**

**Reduce endpoint devices requiring outside forensic investigation services by 80%.**

**Reduction in manual investigations overall by 35% with AI-powered automation.**

"Code42 forensically dictates where [data] moved and the value of what moved, so investigations are shorter. Also, there was no way previously to see movement in unsanctioned cloud destinations, but now we can."
